

adding additional gel to the pouch; and  
creating a second gel filled portion by sealing the partially filled  
pouch to contain the additional gel.

13. The method of claim 12 further comprising:

Creating an additional predetermined number of gel filled  
portions.

14. The method of claim 12 further comprising the step of

creating additional gel filled portions until the pouch is filled  
with gel.

Examiner rejected Claims 1, 3 and 5-14 under 35 U.S.C. 102(b) as being anticipated  
by U.S. Patent 5,490,396 to Morris. Examiner states:

In FIG. 4, Morris teaches a cooler (20) comprising a sidewall  
portion including an outer layer (10) and an inner layer (8) quilted  
(13A-E) to form a plurality of gel pockets; wherein the cooler is  
foldable along regions between the gel pockets (abstract); wherein  
quilting the outer layer and the inner layer results in a polygonal  
shape (see FIG. 3); said cooler further comprising a lid (2)  
including an outer layer (8) and an inner layer (10) quilted to form  
a plurality of gel pockets (col 1, lines 9-10), wherein the lid is  
sealably connected to the sidewalls (9) and wherein the connection  
is a Velcro connection (abstract); wherein said cooler further  
comprises a bottom (col 2, lines 23-25) including an outer layer  
(10) and an inner layer (10) quilted (13) to form a plurality of gel  
pockets, wherein the bottom is fixably attached to the sidewall via  
stitching (col 2, lines 44-46) and wherein the cooler further  
comprises a bottom flap (14) foldably attached to a seam between  
the bottom and the sidewall.

#### Claim 1 (Independent)

Claim 1. A cooler comprising:

A sidewall portion including an outer layer and an inner layer quilted  
to form a plurality of gel pockets; and

Gel disposed in the plurality of gel pockets, wherein the cooler is  
foldable along regions between the gel pockets.

Applicant McCrory disagrees with Examiner in rejecting claim 1 and provides the argument that Morris teaches the use of vertical or horizontal seams, but not both in conjunction with one another within the sidewall. Morris shows quilting only for the purpose of creating a foldable region. Additionally, Morris teaches the cooler having a gel packet bottom, where McCrory does not claim a cooler bottom with gel pockets. McCrory claims the quilting of a plurality of gel pockets within each sidewall, including the areas between foldable regions. McCrory's figures illustrate vertical and horizontal quilting to form a grid of gel pockets in each sidewall portion, keeping the gel from flowing unrestricted throughout the sidewall portion, side to side or top to bottom, thereby providing improved thermal performance. Further, McCrory's foldable regions between gel pockets are merely seams positioned at specific folding locations, rather than the quilted plurality of gel pockets of the sidewall portion, allowing the cooler to be opened when frozen. Applicant asks that Examiner reconsider the rejection and that Claim 1 be allowed on this basis.

#### Claim 2

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,490,396 to Morris, in view of U.S. Patent 6, 474,095 to Chan. Applicant agrees with Examiner's rejection, please cancel Claim 2.

Please add new Claim 2 as follows:

(new) Claim 2. The cooler of claim 1 wherein the inner layer is a temperature resistant plastic.

#### Claim 4

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,490,396 to Morris. Applicant agrees with Examiner's rejection, please cancel Claim 4.

Please add new Claim 4 as follows:

(new) Claim 4. The cooler of claim 1 wherein the foldable regions between gel pockets are heat seals or sonic welds.

Claim 3 (Dependant) and Claims 5-11 (Dependant).

Claim 3 and Claims 5-11 depend on Claim 1 and applicant believes that the argument for allowing Claim 1 may be applied to the patentability of Claim 3 and Claims 5-11 to overcome Examiner's rejection. Applicant asks that Claim 3 and Claims 5-11 be allowed on this basis, however, please amend Claim 7 as follows:

*(Amended)* Claim 7. The cooler of claim 6 wherein the connection is selected from the group consisting of a zipper, ~~Velcro~~ VELCRO, magnets, clips, and snaps.

Claims 12-14

Please amend Independent Claim 12 as follows:

*(Amended)* Claim 12. A method for constructing a cooler, the method comprising:  
providing an inner wall and an outer wall;  
creating a plurality of pouches with the inner and outer walls;  
partially filling the pouches with a gel;  
creating a first set of gel filled portions by sealing the partially filled pouches to contain the gel;  
adding additional gel to the pouches; and  
creating a second set of gel filled portions by sealing the partially filled pouches to contain the additional gel.

Claim 13 and 14 depend on Claim 12 and applicant believes that the amended limitations of Claim 12 may be applied to the patentability of Claim 13 and 14 to overcome Examiner's rejection and ask that these Claims be allowed.

The following is the text of all pending claims (including withdrawn claims)

WHAT IS CLAIMED IS:

1. A cooler comprising:

a sidewall portion including an outer layer and an inner layer

quilted to form a plurality of gel pockets; and

gel disposed in the plurality of gel pockets, wherein the cooler is

foldable along regions between the gel pockets. (Original)

2. The cooler of claim 1 wherein the gel is a saline solution.

(Withdrawn)

2. The cooler of claim 1 wherein the inner layer is a temperature resistant plastic. (New)

3. The cooler of claim 1 wherein quilting the outer layer and the inner layer results in a polygonal shape. (Original)

4. The cooler of claim 1 wherein quilting the outer layer and the inner layer results in a circular shape. (Withdrawn)

4. The cooler of claim 1 wherein the foldable regions between gel pockets are heat seals or sonic welds. (New)

5. The cooler of claim 1 further comprising:

a lid including an outer layer and an inner layer quilted to form a plurality of gel pockets. (Original)

6. The cooler of claim 5 wherein the lid is sealably connected to the sidewalls. (Original)

7. The cooler of claim 6 wherein the connection is selected from the group consisting of a zipper, ~~Velcro~~, VELCRO, magnets, clips, and snaps.

(Currently Amended)

8. The cooler of claim 1 further comprising:

a bottom including an outer layer and an inner layer quilted to form a plurality of gel pockets. (Original)

9. The cooler of claim 8 wherein the bottom is fixedly attached to the sidewall. (Original)

10. The cooler of claim 8 wherein the bottom is attached to the sidewall with a method selected from stitching and hot sealing. (Original)
11. The cooler of claim 9 further comprising:  
a bottom flap foldable attached to a seam between the bottom and the sidewall. (Original)
12. A method for constructing a cooler, the method comprising:  
providing an inner wall and an outer wall;  
creating a plurality of pouches with the inner and outer walls;  
partially filling the pouch with a gel;  
creating a first set of gel filled portion by sealing the partially filled pouches to contain the gel;  
adding additional gel to the pouches; and  
creating a second set of gel filled portions by sealing the partially filled pouches to contain the additional gel. (Currently Amended)
13. The method of claim 12 further comprising:  
Creating an additional predetermined number of gel filled portions. (Original)
14. The method of claim 12 further comprising the step of  
creating additional gel filled portions until the pouch is filled with gel. (Original)
